Harbor Mate® Introduces New USA-made Pontoon Side Ramp featuring Low-Light Illumination Strips

Lightweight aluminum ramp features glow-in-the-dark strips for low-light visibility and added safety.

GERMANTOWN, WI – July 17, 2023 – Harbor Mate®, a marine accessories brand for personal watercraft and recreational boaters, introduces the Harbor Mate Side Ramp with Glow Strips for pontoon boats. Made in the USA, the side ramp equips pontoons with increased accessibility and additional dock-to-boat safety when passengers are embarking or disembarking. The 38" ramp replaces the pontoon side door and operates manually with a pulley. The ramp features raised curbs and punch plate traction, and user-installed, adhesive-backed glow-in-the-dark strips for low light conditions.

Harbor Mate® Side Door Ramp with Glow Strips

Part # [PBS-D-10322](#); MSRP: \$499.99

The Harbor Mate® Side Door Ramp with Glow Strips bridges the gap between the dock and the pontoon platform for passengers with limited mobility, as well as children and pets. The lightweight 22 lb. aluminum ramp supports up to 600 lbs. and installs onto the pontoon deck with a piano hinge. The single-sided, pulley action drawcord eases the raising and lowering of the ramp. Two weather-resistant latches secure it for travel. The ramp's raised, rounded punch plate surface increases traction in all weather conditions. The rubberized curb trim provides added protection to users and the ramp.

For additional safety at dusk or at night, this ramp ships with a roll of commercial-grade, glow-in-the-dark illuminated strips with adhesive backing that users can cut to size and apply as needed anywhere on the ramp surface. The UV-rechargeable strips fully charge in approximately 10 seconds and can illuminate in low light conditions for up to 18 hours.

Installation of the ramp requires removal of the existing pontoon side door, drilling into the deck and side, and proper installation of the included stainless-steel hardware. When the pontoon is in motion and the side ramp is raised and secured, it acts as a barrier in the place of the removed side door.
